

Open programs for protection of authentication information and data encryption (Legal tech)

The workshop shows why authentication information is important, where we go wrong in handling it, and how to protect it. In addition, the role of cryptography in the whole issue and the principle to generally encrypt all data is discussed.

Who are we looking for (discipline, competences, motivations)

Non-technical working with information (law, journalism, political science, administration, medicine, etc.)

Number of participants:

6-10

Goal(s) of the workshop

Increasing the level of security in cyberspace for non-technical people.

Knowledge, skills and competencies to be achieved

Understanding the dangers on the web, the importance of authentication information, practical skills in using software to create an encrypted base, or encryption in general.

Teachers

dr inż. Rafał Prabucki, mgr Jakub Wyczik, dr hab. Dariusz Szostek, prof. UŚ
